

Number of Opioid¹-Related Overdose Deaths, All Intent by City/Town, MA Residents January 2012- December 2016²

Massachusetts Department of Public Health

POSTED: MAY 2017

Note To Readers: This is the first quarterly report for 2017. Please note that throughout all sections of this report there has been a change in the category of deaths that are included. Death data that were previously reported as “Unintentional/Undetermined” has been updated to include deaths of “**All Intent**”, which means that opioid-related deaths that have been determined by the Office of the Chief Medical Examiner as the result of suicide will now be included in the totals. This will not add significantly to the death totals, however it will allow for consistency in interpretation in the data that are presented.

The table below lists the confirmed all intents opioid-related overdose deaths that occurred to residents from each community in Massachusetts between 2012 and 2016. For 2015-2016, additional cases are still being confirmed by the Office of the Chief Medical Examiner. This report will be updated quarterly and all new confirmed cases will be included in the town by town listing below with newly confirmed cases.

City/Town	Year of Death

¹Opioids include heroin, opioid-based prescription painkillers, and other unspecified opioids.

²Please note that 2015-2016 death data are preliminary and subject to updates. Case reviews of deaths are evaluated and updated on an ongoing basis. A large number of death certificates have yet to be assigned final cause-of-death codes. The information presented in this report only includes confirmed cases. Data updated on 04/06/2017.

Technical Notes

1. Cases were defined using the International Classification of Disease (ICD-10) codes for mortality. The following codes were selected from the underlying cause of death field to identify poisonings/overdoses: X40-X49, X60-X69, X85-X90, Y10-Y19, and Y35.2. All multiple cause of death fields were then used to identify an opioid-related death: T40.0, T40.1, T40.2, T40.3, T40.4, and T40.6.
2. This report tracks all opioid-related overdoses due to difficulties in reporting heroin-associated overdoses separately. Many deaths related to heroin are not specifically coded as such due to the fast metabolism of heroin into morphine.
3. To maintain consistency with NCHS reporting, we do not include the ICD-10 code F11.1, which may include opioid-related overdose deaths.
